

macOS Creator Instructions

Getting Started:

To get started, double-click the Install macOS Creator.command file.

The script will ask for confirmation.

Press the Y key and the script will install the app. You may need to enter your password.

An app will appear inside of your Applications folder. Open this app to launch the macOS Creator.

Note: If you are upgrading from a previous version or simply reinstalling the macOS Creator, the script will remove older versions first and then install the updates.

Note: if your Mac is running OS X El Capitan or later, System Integrity Protection will not allow you to open the app. Simply right-click the app and click open, and the app will work fine.

Using the script:

When you first launch the script, you will be guided through a few setup steps to customize the script to your liking and get a familiar feel with the controls, commands, and tools.

Each command is listed like this:

Create macOS Installer.....(1)

If the command ends in a number 1 (in this example) then the number corresponds to that command.

Simply press the number you want for the command, there is no need to press the return key.

If you wish to cancel at any point, press the return key and confirm with Q, the script will cancel.

If you the script is working on a particular command, such as downloading macOS, you press the Control key and the C key at the same time (^ + C).

If you accidentally type the wrong key, you can press W to go back one step. You can press Q to go back to the Home Menu at any point to start over.

If a particular action fails, you can press S to try again.

At some point, the script may ask you to provide a path. This is easy.

Simply grab the file in the Finder and drag it into the terminal window and press the return key.

i.e. Script asks to provide macOS Installer: Drag the app Install macOS Ventura into terminal.

When downloading macOS, the script will save temporary files to your Mac. If you wish to remove those files immediately, you can run the Clean Up command located in the main menu.

Uninstalling the App:

Scroll down the disk image and double-click the Uninstaller.command file. The script will ask for confirmation.

Press the Y key and the script will uninstall the app. You may need to enter your password.
